SUMMARY

Detail-oriented Junior Data Analyst with strong fundamentals in Python, SQL, and data analysis, and a problem-solving mindset grounded in logical thinking and structured reasoning. Experienced in working with datasets to extract insights, perform exploratory analysis, and build analytical queries using SQL and Python. Comfortable with data structures, basic algorithms, and reading technical document.

TECHNICAL SKILLS

- Programming Languages : Python, MySQL
- Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, Plotly, Scikit-learn
- Visualization Tools: Power BI (DAX Measures, KPIs), Excel
- Data Analytics and Statistics: Data Cleaning, Preprocessing, EDA, Feature Engineering, Statistical Analysis, Outlier Detection (IQR), Advanced Statistics(Probability and Hypothesis Testing)
- Database & Query: SQL (MySQL), Joins, Subqueries, Aggregations
- Tools & Technologies: Streamlit, Git/GitHub, Jupyter Notebook, Google Colab
- Relevant Coursework : Artificial Intelligence, Machine Learning, Deep Learning

PROJECTS

Hotel Booking Cancellation Analysis | 🔗

Python, Pandas, NumPy, Matplotlib, Seaborn, Plotly, Streamlit

- GitHub Link : 🔗
- Performed comprehensive Exploratory Data Analysis (EDA) on 119K+ hotel booking records to identify booking patterns and cancellation trends.
- Cleaned and pre-processed data by handling missing values, duplicates, and data inconsistencies to ensure analysis accuracy.
- Conducted univariate, bivariate, and multivariate analyses to uncover relationships between lead time, hotel type, customer segments, ADR, and cancellations.

Python based Smart-Wallet Personal Finance Web App | 🔗

Python, Object-Oriented Programming (OOP), HTML, CSS

- Developed Smart-Wallet, a secure multi-user personal finance web application with authenticated user-specific digital wallets and complete data isolation.
- Implemented features to add balance, record expenses, and view transaction history through a bank-style passbook interface.
- Enabled monthly financial report generation to support expense tracking, budgeting, and better financial decision-making.

Telecom Customer Churn Analysis Dashboard | 🔗

Power BI, DAX, Power Query

- Developed an interactive Power BI dashboard to analyze customer churn patterns and support data-driven retention strategies.
- Performed data transformation and cleaning using Power Query to prepare customer demographic, service, and billing data for analysis.
- Created KPI cards and visualizations to track Total Customers, Churn Rate, Retention Rate, Monthly Charges.

Business Performance Analysis using SQL | 🔗

Analyzing Sales, Customer Behavior, and Drive Data-Driven Decision Making

- Developed an end-to-end business analytics project using MySQL to evaluate performance across departments and regions.
- Applied advanced SQL techniques including CTEs, window functions, and ranking to analyze revenue and identify top-performing projects.
- Uncovered regional growth trends and revenue insights, demonstrating strong data-driven analysis and problem-solving skills.

EDUCATION

B.Tech – CSE (Artificial Intelligence and Machine Learning)

G.H. Raisoni College of Engineering and Management, Jalgaon

2022 – 2026

CERTIFICATES

- Python Programming 🔗
- Exploratory Data Analysis 🔗
- Power BI 🔗
